Intrim Board & Batten Wainscoting

WALL PANELLING THE HOTTEST TREND OF 2022

Up the wall with Intrim Mouldings

Intrim Raised Frame & Panel Wainscoting

When you think of wall panelling, you may experience flashbacks of eras gone by when dark timber, drab interiors and a host of other hideous trends best left to the pages of history reigned supreme. Thankfully, modern wall panelling is nothing like these scary flashbacks, with today's styles only limited by your imagination. The hottest looks emerging in 2022 are timeless options that provide

stylish layers of texture, turning a bland new build or older home renovation into a stylish masterpiece.

VJ WALL PANELLING

Australians can't get enough of VJ wall panelling. Cover existing damaged walls or use it in place of plaster for walls and ceilings in new builds. This option looks great with a variety of interior styles, including Hamptons-, coastal- and country-style homes.

Intrim Cavetto® Wall

Intrim Flat Panel Wainscoting

Intrim VJ Board Pro

CAVETTO WALL

This latest addition to the Intrim Mouldings lining board range is the contemporary yet coastal variant of the Intrim Cavetto Wall LB43. With large scalloped concaves, it makes the ideal feature wall for a statement entrance by adding a layer of texture that can be painted to achieve your vision.

WAINSCOTING

From creating a stunning Hamptons home to adding substance to a modern or more traditional Edwardian, Georgian or French-style home, wainscoting can be used in a

variety of circumstances. Wainscoting panels were originally used to provide insulation, to protect walls from damage and to disguise rising damp from the moisture in the floor. In its contemporary form, wainscoting panels are predominantly an ornamental wall feature that adds extraordinary style, character and value to your interior. There are many wainscoting style choices to suit any look and budget. Most commonly, wainscoting comprises frames and panels that usually cover the lower third of the wall and are topped with a chair rail. You can also frame and panel above the chair rail for a full-wall-height effect, or even double frame

Intrim VJ Board Pro

for a more intricate design. The construction of the panels — either raised or recessed — is another aspect to consider. The selection of the inlay mould, skirting board and chair rail timber moulding size and shape allow the creation of unique looks to suit any style of home.

FLAT-PANEL WAINSCOTING

Flat-panel wainscoting produces clean lines and a stunning Shaker aesthetic. Achieved by applying a sheet of MDF to the wall with timber wall battens, like the Intrim WB01 wall battens that can be arranged vertically or horizontally, the results are streamlined and spectacular.

BOARD & BATTEN WAINSCOTING

Another option for Shaker-style spaces is to apply the Intrim WB01 wall batten directly to the wall. Cover the full height of the wall or stick to the lower third of the wall with a chair rail incorporated. You can even get creative and produce modern patterns and geometrical shapes.

BEADBOARD WAINSCOTING

This coastal style is achieved where narrow vertical boards are run and topped with a chair rail. A modern take on this uses large sheets such as Intrim VJ Board Pro 100 capped with a dado rail.
